DIAGNOSIS & MEDICAL CONDITIONS

PRIMARY DIAGNOSIS: Acute Appendicitis with Peritonitis [ICD-10: K35.2] EMERGENCY SURGICAL CASE

Classification: Appendicitis, Acute, with Peritoneal Abscess

Secondary Condition 1: Localized Peritonitis – inflammation of peritoneum secondary to perforated appendix (ICD-10: K65.0)

Secondary Condition 2: Post-operative Fever – managed with IV antibiotics (Cefoperazone + Sulbactam), resolved by Day 3

Secondary Condition 3: Mild Dehydration on Admission – corrected with IV fluid therapy (Normal Saline + Ringer's Lactate)

Comorbidity: Nil. No pre-existing conditions. Patient was previously healthy.

Nature: Acute onset, first presentation. NOT a pre-existing condition. No prior abdominal surgery or chronic GI illness.

CLINICAL SUMMARY

Presenting Complaint (10-Aug-2026, 22:45 hrs): Mr. Rajesh Kumar Sharma, 35-year-old male, presented to Emergency with 12-hour history of severe right iliac fossa pain, nausea, vomiting, fever (38.2°C). No prior history of similar symptoms.

Investigations: CBC – leukocytosis (WBC: 18,400/mm³). CRP: 142 mg/L. Ultrasound: thickened non-compressible appendix (10.2 mm) with periappendiceal fluid. CECT Abdomen confirmed perforated appendicitis with periappendiceal abscess.

Surgery (11-Aug-2026, 02:30 hrs): Emergency Open Appendicectomy under GA by Dr. Priya Mehta. Perforated appendix with pus; peritoneal lavage + drain placed. Duration: 65 min. Tolerated well.

Post-op Course: IV antibiotics (Cefoperazone-Sulbactam TID × 72 hrs). Drain removed Day 3. Fever resolved. Stable on Day 4.

Discharge (14-Aug-2026): Stable, afebrile, ambulatory. Oral antibiotics (Amoxicillin-Clavulanate 625mg BD × 5 days). Follow-up: 28-Aug-2026.
